WE DO NOT USE MODELS, THEY ARE OUR PATIENTS
Deep Phenol Peeling

Peeling with Phenol is the star treatment at Cirugía Facial Benidorm

We do not use models, they are our patients

DEEP PHENOL PEELING

+ Produces a long-lasting tensor effect
+ Reduces the number, size and depth of the wrinkles
+ Makes the skin look finer and smoother
+ Skin has greater luminosity
+ Clears spots and marks so the color of the entire face is more homogeneous
+ Reduces acne marks, scars and stretchmarks
+ Particularly recommended in the treatment of the famous “barcode” giving excellent, long-lasting results

In fact, it is the only treatment which gives way of this type of ageing unlike others which just reduce or camouflage it.

Spectacular results!
The phenol peeling is a deep chemical peeling for medical use, which is efficient and safe and consists of the application of a chemical solution with a phenol and croton base onto the skin.

It produces a deep querato-coagulation of the proteins of the skin which give way to a complete cutaneous regeneration, eliminating wrinkles and scars and improving the tone and the general texture of the skin. The level of the phenol action is deeper (reticular dermis) than other peelings such as Medium Depth Peeling (follicular dermis) with TCA.

The rejuvenation with deep phenol peeling is the most effective technique available for cutaneous rejuvenation within advanced ageing, superior to resurfacing with CO2 laser which has acclaimed so much fame over the past years. Only through these types of techniques can truly incredible results be achieved.
For us, the medical practice begins with a trusting doctor-patient relationship. We invest as much time as necessary in the study for a personalized diagnosis. We deliver to the patient all the documentation on what is going to be done, how, who, etc., in writing, so that the choice of treatment is as free and informed as possible.

Our facilities for Outpatient Consultations and Ambulatory Surgery are our “flagship”, completely new and equipped with the latest technology. For the hospitalization of patients for major surgeries, we count on the facilities of the Hospital Clínica Benidorm (80 individual beds and 4 new central operating rooms).

You can find all the information regarding our clinic, our doctors and all the treatments with real cases of “before and after” in www.cirugiafacialbenidorm.com and in www.mytreatmentinspain.uk
PROTOCOL
FOR PEELING PATIENTS

WHAT IS THE WHOLE PROCESS IF YOU DECIDE TO CHANGE YOUR APPEARANCE? DO YOU WANT RESULTS LIKE THESE? HOW DO WE DO IT?

A FOUR-HOUR TRIP

FIRST VISIT
Diagnostic examination, patient’s expectations for the treatment, treatment planning and resolution of doubts.
Taking of photographic records.

ONCE THE TREATMENT IS ACCEPTED

SECOND VISIT
8-10 days trip to perform the treatment, + postoperative

JUST A SECOND TRIP

HOW IS THE TREATMENT DONE?

The phenol peeling is an important treatment with post operatory treatments comparable to surgical procedures such as face lifts. The definition and the following of the protocol must be strict.

In cases of complete facial rejuvenation, the operation takes place in 90 minutes and is carried out under local anaesthetic and intravenous sedation whilst being monitored.

It is possible to treat only certain facial areas such as the lips or periocular area, in this case the post operatory care will be limited, but in full-face treatments (all of the face), the edema is moderate for the first 24-48 hours and the cutaneous re-epithelialization takes place for 7-10 days.

During this time the patient should stay in their home, hospital or hotel depending on their preferences or origin.

If you are visiting from abroad our patient care team will organise the accommodation.
FREQUENTLY ASKED QUESTIONS

Will they talk to me in my language?
You can count on our bilingual personnel and translators of more than 7 languages.

What guarantees do I have before travelling to Spain for treatment?
Before your journey you will receive all the legal documents:
- Medical reports and diagnoses stamped by your registered doctor. What your problem was and what the recommended solution is.
- Estimate.
- Information about the treatment to be carried out and Pre / Post treatment protocols.
- Legal informed consent forms for each treatment.

Who will my doctor be? Is he/she experienced?
On our website you can consult the CVs and experience of all our personnel.

What happens if any complications arise?
Major surgery procedures are carried out in the Hospital Clínica in Benidorm, one of the best known and most prestigious hospitals in the area. If what needs doing is out-patient surgery, with no hospitalization, it will be done in our own operating rooms. Our clinic is just a few meters from the door of the hospital mentioned above, to which we belong.

Would you like to ask another question?
Contact us (+34) 966 80 48 41 or lookingfor@mytreatmentinspain.uk and info@cirugiafacialbenidorm.com

In the cases of complete rejuvenation, during the first week, the controls and the post operative care should be carried out every 2, 4 then 7 days; the medical team usually travels to the location where the patient is staying.

It is absolutely essential within the protocol, the use of specific cosmetic treatments before and after the procedure which are given to the patients 15 days before the treatment.

Peeling can be carried out in particular areas rather than the whole face in general. The most frequent areas are Perioral peeling, which treats the wrinkles around the mouth, or Orbicular peeling which treats the wrinkles around the eyes.
Sheila is an Englishwoman who is in love with Spain. She travels a lot, does outdoor activities, and (of course) she likes sunbathing. Like many women she has always been fussy about her appearance and has used moisturizing creams, eyeliners, etc. and so has tried the usual products and other alternative, natural and ecological remedies.

Sheila initially came to us to talk about “little aids” like botox type retouches, mesotherapy, or vitamin injections but also asked for information about peelings because a friend of hers had had one done at Cirugía Facial Benidorm and was delighted with the results.

After an exhaustive examination and interviews with the doctor, together they decided that a deep peeling with Phenol combined with a few sessions of vitamins, etc. would be the best answer to kind, dynamic Sheila’s expectations.

Another patient who has become a friend and whose testimony you can read here.

Hello Sheila. What was your initial problem?
“I had been using creams and natural products but after I passed 50 the products no longer offered me the results I wanted. I talked to a friend and she told me about this clinic and this treatment.”

What finally made you decide to have the treatment?
“I spent some time looking into the the treatment and got quite upbeat about it but what finally persuaded me was seeing the “before and after” cases and talking to Dr Battlés. He answered all my doubts and I then felt confident enough to agree to the treatment.”

How has it changed you?
“I am delighted, not just because I look prettier and everyone tells me so, but I feel that this face corresponds to my personality and my active way of life. Besides that, the result looks so natural. You notice that you are much better but without changing any of your features.”

What advice would you give to someone in your same situation?
“Ask questions, get informed and get any doubts cleared up. Then take the plunge. After my experience and looking at the results I would always do the same again.”
What makes us different from the rest?

The first and most important fact is that we are a consolidated team of medical specialist professionals in all that concerns the face-mouth-neck; we do not treat cases as something isolated from the rest.

In our Unit Rhinoplasty and Orthognatic Surgery you can find a group of global experts: Maxillofacial Surgery, Plastic Surgery, Orthorhinolaryngology, Dermatology, Cosmetic Medicine and Clinical Dermocosmetics. United to offer a true integral treatment adequate for the needs of every patient.

All of the pathologies, all of the solutions, all of the treatments in the same place, attended to by specialists who will study your case and will design a made to measure plan to attend to all your needs.

In the Rhinoplasty and Orthognatic Surgery Unit we carry out personalised integral treatments combining surgical techniques from the simplest to the most complex, under general or local anaesthetic, together with minimally invasive medical and dermocosmetical procedures. Visit our installations. We have an operating theater to offer maximum safety and the best working atmosphere. We have a team of anaesthetists if preferred or needed.

You can find our prices and conditions of treatments published on our web page. With no small print. With no catches.

We offer made to measure finance plans so that money is not a problem.

For all these reasons of this we receive many patients in the rebound from other clinics. Unsatisfied patients who feel conned. It’s very sad but it’s the way it is. For this reason I have decided, as director of the center who is passionate about the career I love, to write this article, so that any patient, after reading this information can decide who and where.
